Re: Controls Retrofit Commissioning

Dear Ms. Brown:

This letter confirms that Vazquez, Sanchez and Gutierrez has engaged Torchlake Engineering Group LLC to commission the building automation retrofit now finishing installation at your headquarters building. Our role is owner's-side verification: the controls contractor demonstrates, we test, and nothing gets signed off because the graphics look right.

Scope of commissioning:

- Point-to-point checkout verification on a sampled basis, with full retest of any panel that fails its sample.
- Functional performance tests of every air handler, the chilled-water plant, and the emergency sequences.
- Two weeks of trend-data review after acceptance, plus opposite-season verification within the term of this engagement.

Jeff Fowler, Engineering Manager, directs the engagement; John Johnson, Project Engineer, runs the functional tests and keeps the issues log your team and the contractor will work from. We will need controls submittals, the points list, and a contractor technician on site during test days.

Commissioning begins on May 25, 2023. Our fee for the scope above is a fixed fee of \$116,500, invoiced monthly against progress. Scope changes, including retest days beyond the two allowed for contractor failures, are agreed in writing before the work.

We appreciate the continued confidence. Please sign below and return one copy to my attention.

Sincerely,

David Jones

President
